FRONTEND TAKE-HOME

Support Copilot

A small internal tool: a copilot chat next to a tickets panel. You can ask the assistant about the tickets, and it streams a reply back word by word. Treat this as a piece of an existing codebase you've just inherited.

ON THE "AI"

There is **no backend and no API key**. The assistant is a local mock (`src/agent/mockAgent.ts`) that streams canned responses, so the whole app runs offline. The streaming shape mirrors a real agent — that's the part that matters for this exercise.

SETUP

```
$ npm install
$ npm run dev
```

Other scripts: `npm run typecheck`, `npm run test` (vitest — no tests yet), `npm run build`.

YOUR TASK

Here's what we'd like you to do:

1. Read the code and write up what it does and what concerns you (`NOTES.md`).
2. Fix the reported bug below.
3. Refactor one area you think most needs it (behaviour unchanged).
4. Make one small improvement of your own choosing — a small feature, a UX fix, or a piece of polish you think the app most needs. In `NOTES.md`, tell us why you chose that one. There's no hidden spec; the choice is the point.
5. Improve one performance or accessibility issue. **OPTIONAL**

You may use any AI tools — just note in `NOTES.md` where you used them and how you checked the output.

TIME

This is designed to take about **3 hours of focused work**.

You have **three days to submit**, simply so you can fit it around your schedule — it is **not** meant to take three days. We give **no extra credit** for extra hours, extra polish, or extra features; we care about your thinking and trade-offs. If you reach the ~3-hour mark, stop and note in `NOTES.md` what you'd do next.

REPORTED BUG

USER REPORT

> *"If I send a message and then quickly send another one before the assistant has finished answering the first, the two replies get mixed together into one message — and sometimes text keeps appending to the wrong reply. If I wait for each answer to finish, it's fine. Can you look into it?"*

Please find the root cause, fix it, and explain what was happening.

Thanks for taking the time — we're looking forward to seeing how you think.
